

SIAM (the Society for Industrial and Applied Mathematics) will be publishing *Learning MATLAB*, an updated and improved version of the "Crash course in MATLAB", in spring or summer 2009. It will be available in print and as an e-book. Pricing is unknown at this writing, but a major goal has been to keep the length and price appropriate for a supplemental textbook.

This book represents the evolution of a MATLAB cheat sheet that grew to a hundred pages over a period of more than ten years. For all of that time, I have made various incarnations of the "Crash course" available on the web for free. However, SIAM is rightfully concerned about eating into new sales, and they have requested that I no longer make the "Crash course" available on this site. I apologize for any inconvenience this may cause.
